

INITIAL OPEN SEASON INDICATES STRONG MARKET SUPPORT FOR ROCKIES ALLIANCE PIPELINE

*Combined with existing infrastructure, the new Rockies Alliance Pipeline system will provide
“seamless service” to key natural gas markets*

CALGARY, Alberta – (JUNE 23, 2008): Alliance Pipeline Inc. (Alliance) and Questar Overthrust Pipeline Company (Questar Overthrust) are pleased to announce a positive response from prospective shippers to the Rockies Alliance Pipeline (RAP) open season which closed on June 16. The initial support totaling approximately 500,000 Dth/d comes from both Rockies producers and Midwest markets and demonstrates the value of Rockies Alliance Pipeline to deliver clean burning, low cost natural gas to US and Canadian markets.

“Since the open season began May 15, we’ve had strong interest from prospective shippers in the Rockies Alliance Pipeline project,” said Murray Birch, president and chief executive officer of Alliance Pipeline. “The Rockies Alliance Pipeline will provide increased transportation and supply options to the Chicago market area through the Alliance system which connects to Guardian, Vector, Peoples, Nicor, ANR, NGPL and Midwestern pipeline systems. Both the producers and end-users have acknowledged that RAP is best suited to match the growing Rockies production with the large Midwest market demand. Both Alliance and Questar Overthrust will continue to work with prospective shippers to fully subscribe capacity of the pipeline to 1.3 billion cubic feet per day (Bcf/d).”

The Rockies Alliance Pipeline project will take delivery of natural gas from Opal, Meeker and Wamsutter and terminate at Alliance Pipeline delivery points in the Chicago area. Initially, the 875-mile, 42-inch diameter pipeline system will have a capacity of 1.3 Bcf/d and is expandable to 1.8 Bcf/d with the addition of compression.

Questar Overthrust Pipeline’s president and chief executive officer Allan Bradley said, “We’re encouraged by both producer and end-user interest in our project. Natural gas production in the northern Rockies is up about 15 percent from a year ago. We are focused on quickly refining our design and completing negotiations with other shippers to fast-track the Rockies Alliance Pipeline so gas supplies

from this fast-growing producing region can be delivered to Midwestern and Eastern markets.” In addition, Bradley noted: “Questar Overthrust’s concurrent open season was very successful. It included requests for over 1.0 Bcf/d of new pipeline capacity to access Rocky Mountain export hubs such as Wamsutter for delivery into Rockies Alliance Pipeline.”

Once Rockies Alliance Pipeline has received the necessary support for its project, Alliance and Questar Overthrust will proceed with the first phase of the engineering and environmental work. The companies are also planning to request permission from the Federal Energy Regulatory Commission to participate in the agency’s Pre-Filing Process that allows public participation in the routing of new natural gas pipelines.
